## About This Game

### Overview

Orbox C is a puzzle game with lots of levels. The game done with a sci-fi spacey graphics, good sound and music. Controls are simple and responsive. We put great effort into level design.

Move the orbox between various blocks to complete the missions. There are several types of missions. 8 packs with 30 levels in each pack. 240 levels overall. We plan to add more level packs into the game with new exciting mechanics!

Below you may see a lot of reviews from youtubers who we gave keys to play our game. And you may think - "can I trust them?" So let us tell about it. We never ask youtubers to be nice. They decide what to do by themselves. Some of them even show our email text in their videos(why?). So everything very open here. Often we get answers like - "OK I can try your game, but I warn you, I will give only honest opinion and if I don't like something then I will tell so. If it's OK with you then send me key". And yes that is totally OK for us. Because we think our game is a really good puzzle.

### Levels

**Packs(30 levels in each):**

- 
- Easy
  - Average
  - Normal
  - Hard
  - Easy 2
  - Speed
  - Filled
  - Bonus

There is some sci-fi story idea behind this. We may add story mode if the game go good. If you want to know few details about this. Here they are:

In distant future 30XX giant box shaped objects started to appear just from nowhere. Destroying everything under them. People called them - Necroids. They look like some kind of giant bio cells. They just appear and stay on place.

Orbox is an experimental way to destroy necroids. The weapon power is too weak against necroids. Orbox made from very rare materials. There is pilot inside it, in a capsule with liquids. So he controls the orbox.

The size of the orbox is a size of a basic necroid. So it's very huge. A size of a star. The blocks and other stuff in the game are not solid objects. That would take too much resources. Those are special projections created by small projectors.

Necroids provoked another danger. Necrobots. A robots that found benefits from necroids, and destroy everyone around. But there is a twist about that I would not reveal here.

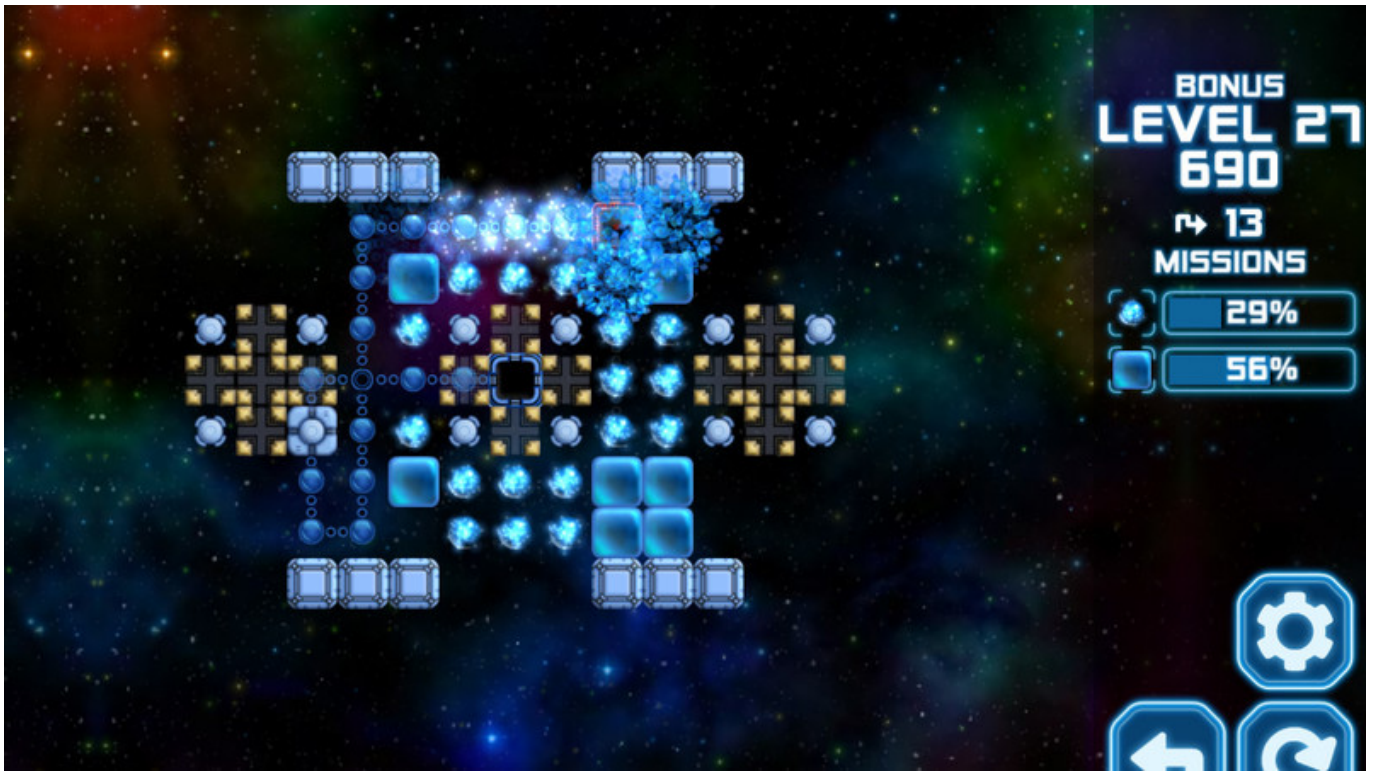

Note: Currently there are no necroids and necrobots in the game. I hope in future we will update the game with the story mode and those enemies. First we work on some other updates. You can find info in the community page. In the topic "What kind of updates can be expected?"

orbox c hacked. orbox b unblocked. orbox for cats. orbox c level 29. orbox c apk. orbox c level 24. orbox c level 22. orbox b game. orbox c level 26. orbox c level 21. orbox c level 10. play orbox c. orbox c steam. orbox c level 30. orbox c level 15. orbox c walkthrough. orbox c level 20. orbox c level 11. orbox c level 23. orbox c level 18

A quite enjoyable take on this puzzle type. All the special elements are well done and adds depth and strategy to an otherwise fairly basic puzzle. Upping the challenge drastically.

Warmly recommended. Eyepleasing graphics and sound. Well worth the cost for a brainteaser like this one.. Nice colors.

\* Interesting game.

Gameplay commentary: [www.youtube.com/watch?v=zVJ7\\_tEDFXg](http://www.youtube.com/watch?v=zVJ7_tEDFXg). Orbox C is a good game for you if you enjoy problem solving puzzle games with a good sound track. The game itself controls very easily as you only need to use the arrow keys. Any one can pick up this game and play it. It's inexpensive, fun, and definitely worth that three dollar sale price.. I liked it, sometimes I did over think things (at level 20? now, bomb just appeared) and made them more complicated than they were, but it wouldn't be much of a puzzle if you'd just run straight through it... :)

The "worst" part is that just as you think you're getting the hang of it they introduce a new mechanic just to make sure you're confused again...

One of those perfect to play now and then games, while uploading, installing and so on as it barely touches your system resources and will be fun to play in short bursts too.. I really like the game and for the money that the developers are asking, it's really worth it and I recommend it!

You have a lot of puzzles to solve as well as interesting and creative mechanics with which these puzzles are built, it really makes you think and, to be honest, that is appreciated, since, indeed, games of this kind are very important to stimulate the mind

The sound design of the game is very good, the overall music of the game is quite relaxing, epic and satisfactory to listen to when you try to concentrate, and although, in general, the graphics of the game or backgrounds are simple, not It robs you of the experience and of a certain immersion that may exist given by the experience.

In my opinion, it is really worth it, I recommend it if you are looking for a game to think at a price that is too accessible.. I play a lot of 2d puzzle games and this one was really fun. It's not blisteringly difficult like some others but it has some tricky levels. If you like a challenge with bright flashy lights than check this out. It's worth the couple of bucks for is.. Fantastic puzzle game, been waiting for it since Greenlight and it was well worth waiting.

A lot more polished and fun to play now.

. Orbox C is a very simplistic puzzle game set in space where you have to move a box to the exit. To move towards the exit you basically have to stop your block on other blocks in order to get to the exit without floating off into space. As you progress through the levels you will be greeted with different mechanics to keep the game interesting. For example on level 4 'angles' are introduced for the first time which are basically corner pieces which whizz you around the map in a 90 degree angle in a particular direction. The levels are very quick and usually only take a few minutes so the game makes you feel like you are progressing at a particularly fast rate which can make the player feel quite accomplished. There are 8 packs each consisting of 30 levels each so there are a ton of levels to sink your teeth into for a low affordable price. So far i have only played on the easy difficulty setting which still provides a slight challenge.

Here is a quick gameplay video for a better view of how the game actually works:

<https://www.youtube.com/watch?v=XxIKADQJZg>

PROS:

- fast
- tons of levels
- simple controls

---

- affordable price

CONS:

- simple

- not many options in the settings, for resolution etc

- backgrounds & music are mostly the same & could do with more variety. For 3 bucks you get something that might as well be a Flash Game Classic, a piece of Flash-Game history.

It's a decent enough puzzler, you'll get your money's worth.

A nice, straightforward game to play and enjoy.

---

A simple concept: sliding blocks in a frictionless void, done amazingly well. Keep at it, Arseniy!. Wow, this one is a surprise. I was expecting another one of those cheap steam game with unachieved potential, but this game is really well done. It's a sliding block puzzle game, you get varying gimmicks every few stages to keep things fresh, but what really makes this game is the level design!

The difficulty ramps up juuust right, staying moderatly challenging while never becoming overwhelming. It leaves you room to learn and grow without ever feeling like it's holding your hand at all. The gimmicks are introduced in simple levels, and then gradually taken to challenges which really utilize their mechanics.

Really, if you're in the mood for a pure puzzle game, I don,t think you can go wrong with this one.. I really like the game and for the money that the developers are asking, it's really worth it and I recommend it!

You have a lot of puzzles to solve as well as interesting and creative mechanics with which these puzzles are built, it really makes you think and, to be honest, that is appreciated, since, indeed, games of this kind are very important to stimulate the mind

The sound design of the game is very good, the overall music of the game is quite relaxing, epic and satisfactory to listen to when you try to concentrate, and although, in general, the graphics of the game or backgrounds are simple, not It robs you of the experience and of a certain immersion that may exist given by the experience.

In my opinion, it is really worth it, I recommend it if you are looking for a game to think at a price that is too accessible.. Fun little puzzle game! It gets more challenging as it progresses, but I would definitely recommend it to anyone who likes puzzles! And space. Here is the first 30 levels of easy mode on it: <https://youtu.be/X9yRnYwtTow>. Good relaxing puzzle game with plenty of content. The puzzles get progressively harder but do have logical solutions. I've completed the easy puzzles and about half of the normal puzzles. The speed puzzles are quite challenging too although not so much to my taste.

Recommended and very reasonably priced.. A simple concept: sliding blocks in a frictionless void, done amazingly well. Keep at it, Arseniy!. I really enjoyed playing this puzzle game. The mechanics of solving puzzles are clearly explained and never did I feel I could never solve a level, I knew there was a way. I think this came from how each of the levels were designed in a way to guide the player through them without steep jumps in difficulty.

The visuals, sound a music are well-polished and compliment the sci-fi atmosphere really well.

Looking forward to play this again.
